

## Category J Identity Profile – Low Benzene Naphthas

*This CIP represents the boundary substance compositions in the Joint Registrations for substances in **Category J** under the EU legislation REACH<sup>1</sup>. It is included in the Lead Registrant dossiers that are submitted to ECHA<sup>2</sup>. For a valid Joint Registration, the joint registrants' own composition needs to fit within the boundaries (concentration ranges) of the constituents and purity described here. For further details, see the section on Category Identity Profile and Boundary Composition at the end of this document.*

### Description of composition

The low benzene naphthas category contains hydrocarbons (aliphatic, aromatic and olefinic) with carbon numbers predominantly in the C7-C13 range and boiling from approximately 80°C to 300°C. Members of this category contain <0.1% benzene and contain varying amounts of toluene, xylenes and ethylbenzene.

### State / form

Liquid

### Manufacturing Process

The low benzene naphthas category contains hydrocarbons (aliphatic, aromatic and olefinic) with carbon numbers predominantly in the C7-C13 range and boiling from approximately 80 °C to 300 °C. Members of this category contain <0.1% benzene and contain varying amounts of toluene, xylenes and ethylbenzene. Category members are typically produced by the distillation of products from a steam cracking process or by pyrolysis.

## Constituents

The following constituents were selected based on the category composition data as reported by the registrants. As per the ECHA UVCB guidance, constituents which are CMR and/or PBT above 0.1% and other constituents  $\geq 10\%$  are reported in the table below.

The concentration ranges shown in this table directly reflect the boundary composition submitted in the lead registrant's dossier.

Constituent / CAS No	Typical Concentration	Concentration Range	Remarks
Benzene / 71-43-2	0 % (w/w)	< 0.1 - (w/w)	
Toluene / 108-88-3	ca. 30 % (w/w)	0 - $\leq 50$ % (w/w)	
Ethylbenzene / 100-41-4/	ca. 5 % (w/w)	0 - $\leq 50$ % (w/w)	
Xylenes / 1330-20-7	ca. 15 % (w/w)	0 - $\leq 25$ % (w/w)	
m-xylene / 108-38-3	ca. 10 % (w/w)	0 - $\leq 20$ % (w/w)	
o-xylene /	ca. 2.5 % (w/w)	0 - $\leq 10$ % (w/w)	
p-xylene /	ca. 2.5 % (w/w)	0 - $\leq 20$ % (w/w)	
2-Ethyltoluene / 611-14-3	ca. 10 % (w/w)	0 - $\leq 40$ % (w/w)	
3-Ethyltoluene/ 620-14-4	ca. 15 % (w/w)	0 - $\leq 40$ % (w/w)	
4-Ethyltoluene / 622-96-8	ca. 10 % (w/w)	0 - $\leq 40$ % (w/w)	
Ethyltoluene / 25550-14-5	ca. 5 % (w/w)	0 - $\leq 50$ % (w/w)	
Naphthalene / 91-20-3	ca. 2.5 % (w/w)	0 - $\leq 15$ % (w/w)	
Methylnaphthalene / 1321-94-4	ca. 20 % (w/w)	0 - $\leq 75$ % (w/w)	
Styrene / 100-42-5	ca. 20 % (w/w)	0 - $\leq 20$ % (w/w)	
Tetralin / 119-64-2	ca. 5 % (w/w)	0 - $\leq 15$ % (w/w)	
Indane / 496-11-7	ca. 7.5 % (w/w)	0 - $\leq 15$ % (w/w)	
Isopropylbenzene / 98-82-8	ca. 10 % (w/w)	0 - $\leq 20$ % (w/w)	
Propylbenzene / 103-65-1	ca. 10 % (w/w)	0 - $\leq 20$ % (w/w)	
Dicyclopentadiene / 77-73-6	ca. 0.5 % (w/w)	0 - $\leq 2$ % (w/w)	
Indene / 95-13-6	ca. 15 % (w/w)	0 - $\leq 40$ % (w/w)	
Dihydrodicyclopentadiene / 4488-57-7	ca. 15 % (w/w)	0 - $\leq 30$ % (w/w)	
1,2,4-trimethylbenzene / 95-63-6	ca. 12.5 % (w/w)	0 - $\leq 25$ % (w/w)	
1,2,3-trimethylbenzene / 526-73-8	ca. 7.5 % (w/w)	0 - $\leq 15$ % (w/w)	
1,3,5-trimethylbenzene / 108-67-8	ca. 2.5 % (w/w)	0 - $\leq 5$ % (w/w)	
1,2,4,5-tetramethylbenzene / 95-93-2	ca. 15 % (w/w)	0 - $\leq 35$ % (w/w)	
1,2,3,5-tetramethylbenzene / 527-53-7	ca. 15 % (w/w)	0 - $\leq 30$ % (w/w)	
Tetrahydrodicyclopentadiene / 6004-38-2	ca. 5 % (w/w)	0 - $\leq 10$ % (w/w)	
2-methylstyrene / 611-15-4	ca. 0.8% (w/w)	0 - $\leq 2$ % (w/w)	
<b>PIONA</b>			

Constituent / CAS No	Typical Concentration	Concentration Range	Remarks
Paraffins	ca. 0.5 % (w/w)	0 - ≤ 14 % (w/w)	
Isoparaffins	ca. 0.5 % (w/w)	0 - ≤ 12 % (w/w)	
Olefins	ca. 5 % (w/w)	0 - ≤ 30 % (w/w)	
Naphthenics	ca. 0.5 % (w/w)	0 - ≤ 34 % (w/w)	
Aromatics	ca. 45 % (w/w)	≤ 100 % (w/w)	PAHs that are known to be PBTs are excluded.

### Impurities

*Not applicable to UVCBs*

### Additives

*Not applicable to UVCB*

## Category Identity Profile and Boundary Composition

This Category Identity Profile has been produced following the currently available ECHA guidance<sup>3</sup> by the Analytical Working Group, a Working Group of the LOA Technical Steering Committee, following consultation with Registrants.

The CIP defines the compositional boundaries of the substance that is to be (or has been) registered and consequently the substance for which intrinsic hazard data is submitted, as defined by Annexes VII-X of REACH. It is a document usually agreed between the registrants and potential registrants.

With the introduction of IUCLID 6<sup>4</sup> in April 2016 it became necessary for the Lead Registrant to enter the CIP details into Section 1.2 of IUCLID as the “boundary composition” of the registration prior to any new submission or spontaneous update. Failure to add it will cause rejection of the dossier when uploading into REACH-IT.

The business rules of REACH-IT also check that information is present which verify that minimum information is present: at least one constituent must be provided, and for each constituent, impurity and additive a reference substance with identifiers, and a concentration range must be given. For UVCB substances, a description of the starting material and process that defines the UVCB composition must be indicated. After submission, the information is displayed on the joint submission page so it can be seen by members of the Substance Information Exchange Forum (SIEF).

It is not necessary for joint registrants to report on boundary composition. However, joint registrants are required to enter their legal entity composition which is automatically checked against the substance boundary composition to ensure that the joint registrant’s composition fits into the boundary composition of the CIP.

If a joint registrant is outside the CIP and boundary composition, they need to state this in their dossier - details are given in the ECHA guidance.
