

Category Identity Profile

*This CIP represents the boundary substance compositions in the Joint Registrations for substances in **Category G** under the EU legislation REACH¹. It is included in the Lead Registrant dossiers that are submitted to ECHA². For a valid Joint Registration, the joint registrants' own composition needs to fit within the boundaries (concentration ranges) of the constituents and purity described here. For further details, see the section on Category Identity Profile and Boundary Composition at the end of this document.*

Description of composition

The substances within this category consist predominantly of hydrocarbon streams with a carbon number distribution that is predominantly C6 and higher. The streams in this category have a boiling point range typically starting at >70 °C. The fuel oils category is driven by benzene as Category 1 Carcinogen, Category 2 Mutagen. Most of the streams in this category contain >0.1% benzene.

State / form

Liquid

Manufacturing Process

The 'fuel oils' category covers hydrocarbon streams typically produced by the distillation of products from a steam cracking process, by the distillation of products from an ethylene manufacturing process, obtained as the residual fraction from the distillation of the products of a steam cracking process, or residual fractions from ethylene/benzene chemical processing, or produced by pyrolysis. Predominantly contains hydrocarbons greater than C6 and a boiling range typically starting at >70 °C.

¹ REGULATION (EC) No 1907/2006 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC

Constituents

The following constituents were selected based on the category composition data as reported by the registrants. As per the ECHA UVCB guidance, constituents which are CMR and/or PBT above 0.1% and other constituents $\geq 10\%$ are reported in the table below.

The concentration ranges shown in this table directly reflect the boundary composition submitted in the lead registrant's dossier.

Constituent / CAS Number	Typical Concentration	Concentration Range
Isomer of Diethylbenzene / 1,2: 135-01-3 1,3: 141-93-5 1,4: 105-05-5 25340-17-4	ca. 42% (w/w)	0 - 83% (w/w)
C21 and larger aromatics / NA	ca. 33% (w/w)	0 - 66% (w/w)
Naphthalene / 91-20-3	ca. 30% (w/w)	0 - 60% (w/w)
Diaromatics / NA	ca. 25% (w/w)	0 - 50% (w/w)
Indane / 496-11-7	ca. 17% (w/w)	0 - 34% (w/w)
Isomer of Methylnaphthalene / 1321-94-4	ca. 16% (w/w)	0 - 32% (w/w)
C16 aromatics / NA	ca. 16% (w/w)	0 - 32% (w/w)
Tetralin / 119-64-2	ca. 13% (w/w)	0 - 26% (w/w)
Isomer of Methylindene / 767-59-9	ca. 13% (w/w)	0 - 25% (w/w)
Diphenylethane / 612-00-0	ca. 13% (w/w)	0 - 25% (w/w)
C17 aromatics / NA	ca. 11% (w/w)	0 - 21% (w/w)
Benzene / 71-43-2	ca. 10% (w/w)	0 - 19% (w/w)
Biphenyl / 92-52-4	ca. 10% (w/w)	0 - 19% (w/w)
C11H14 cyclic olefin / NA	ca. 10% (w/w)	0 - 19% (w/w)
C10 aromatics / NA	ca. 9% (w/w)	0 - 18% (w/w)
C11 aromatics / NA	ca. 9% (w/w)	0 - 18% (w/w)
Isomer of Diethylbiphenyl / 61141-66-0 13049-35-9 28575-17-9 64800-83-5 6632-78-6 13049-38-2 13049-40-6	ca. 12.5% (w/w)	0 - 25% (w/w)

Constituent / CAS Number	Typical Concentration	Concentration Range
Polyaromatics / NA	ca. 7% (w/w)	0 - 14% (w/w)
C14 aromatics / NA	ca. 7% (w/w)	0 - 14% (w/w)
C13H14 (C3-naphthalenes) / NA	ca. 7% (w/w)	0 - 13% (w/w)
Isomer of Dimethylnaphthalene / 581-42-0 571-58-4	ca. 6% (w/w)	0 - 12% (w/w)
Phenanthrene / 85-01-8	ca. 4% (w/w)	0 - 7% (w/w)
Anthracene / 120-12-7	ca. 1.5% (w/w)	0 - 3% (w/w)
Toluene / 108-88-3	ca. 1% (w/w)	0 - 2% (w/w)
Styrene / 100-42-5	ca. 1% (w/w)	0 - 2% (w/w)
Dicyclopentadiene (DCPD) / 77-73-6	ca. 1% (w/w)	0 - 2% (w/w)
Pyrene / 129-00-0	ca. 0.5% (w/w)	0 - 2% (w/w)
Benzo(a)pyrene / 50-32-8	ca. 0.5% (w/w)	0 - 1% (w/w)
Fluoranthene / 206-44-0	ca. 0.5% (w/w)	0 - 1% (w/w)
Chrysene (benzophenanthrene) / 218-01-9	ca. 0.5% (w/w)	0 - 1% (w/w)
Tetraphene (Benz(a)anthracene) / 56-55-3	ca. 0.5% (w/w)	0 - 1% (w/w)
Benzo(k)fluoranthene / 207-08-9	ca. 0.5% (w/w)	0 - 1% (w/w)
Isomer of Butyltoluene / 1595-05-7	ca. 0.5% (w/w)	0 - 1% (w/w)
1,2-diphenylethane / 1,1'-ethane-1,2- diylidibenzene / 103-29-7	ca. 30% (w/w)	0 - 60% (w/w)
PIONA		
Paraffins	ca. 0.5 % (w/w)	0 - ≤ 1 % (w/w)
Isoparaffins	ca. 0.5 % (w/w)	0 - ≤ 1 % (w/w)
Olefins	ca. 10 % (w/w)	0 - ≤ 20 % (w/w)
Naphthenics	ca. 17.5% (w/w)	0 - ≤ 35 % (w/w)
Aromatics	ca. 50 % (w/w)	0 - ≤ 100 % (w/w)

Category Identity Profile and Boundary Composition

This Category Identity Profile has been produced following the currently available ECHA guidance³ by the Analytical Working Group, a Working Group of the LOA Technical Steering Committee, following consultation with Registrants.

The CIP defines the compositional boundaries of the substance that is to be (or has been) registered and consequently the substance for which intrinsic hazard data is submitted, as defined by Annexes VII-X of REACH. It is a document usually agreed between the registrants and potential registrants.

With the introduction of IUCLID 6⁴ in April 2016 it became necessary for the Lead Registrant to enter the CIP details into Section 1.2 of IUCLID as the “boundary composition” of the registration prior to any new submission or spontaneous update. Failure to add it will cause rejection of the dossier when uploading into REACH IT.

The business rules of REACH IT also check that information is present which verify that minimum information is present: at least one constituent must be provided, and for each constituent, impurity and additive a reference substance with identifiers, and a concentration range must be given. For UVCB substances, a description of the starting material and process that defines the UVCB composition must be indicated. After submission, the information is displayed on the joint submission page so it can be seen by members of the Substance Information Exchange Forum (SIEF).

It is not necessary for joint registrants to report on boundary composition. However, joint registrants are required to enter their legal entity composition which is automatically checked against the substance boundary composition to ensure that the joint registrant’s composition fits into the boundary composition of the CIP.

If a joint registrant is outside the CIP and boundary composition, they need to state this in their dossier - details are given in the ECHA guidance.
